
SAFETY OF FUNDS

Nothing is more important for an online broker than safeguarding its clients' funds and assets. We at ETFinance go beyond the general security norms and take extra measures to make sure our traders are protected.

Segregated Accounts

We use segregated accounts for our clients' funds, keeping them separate from the business' accounts, each one held with a trusted, regulated banking institution.

Advanced Technology

We make use of the most advanced software and hardware to ensure the safety of every transaction and combine physical and technical security measures to protect all data systems. These include:

- Rigorous firewalls and Secure Sockets Layer (SSL) software to protect information during transmission
- PCI-DSS Level 1 certified payment services which are EU regulated to handle all financial transactions
- Encryption on the data transferred between our servers
- Our trading server location is in data center SAS 70 certified.

Adherence to Anti-Money Laundering (AML) Regulations

ETFinance is fully compliant with the EU Anti-Money Laundering (AML) Regulation and related international practices. As a financial institution, we are committed to safeguarding the integrity of our payment mechanism and financial systems through the verification of investors' identities prior to becoming our clients
